### What is astrophysics?

Astrophysics is the branch of astronomy that deals with the physical properties of celestial objects. It is a vast and complex field that encompasses everything from the study of the Sun to the study of the most distant galaxies.

Astrophysicists use a variety of tools to study the universe, including telescopes, satellites, and computer simulations. They use these tools to measure the properties of celestial objects, such as their temperature, mass, and composition. They also use these tools to study the interactions between celestial objects, such as the formation of stars and galaxies.
